

GADSL declaration

We declare that in the manufacturing of the aluminium and aluminium alloy products produced by **Arconic-Kőfém Mill Products Hungary Kft.** that our operations and material declarations fully comply with the requirements of the GADSL. All substances used in our products are monitored and reported according to GADSL guidelines, ensuring alignment with applicable global regulations and industry standards

Explanation of Referenced Directives

The Global Automotive Declarable Substance List (GADSL) is an internationally recognized list developed by the Global Automotive Stakeholders Group (GASG). Its purpose is to identify substances that are either prohibited or declarable within the automotive industry due to regulatory, environmental, or safety concerns. GADSL supports compliance with major international regulations such as the EU REACH Regulation, the End-of-Life Vehicles Directive (ELV), and other chemical control laws worldwide. It provides a harmonized framework for reporting substances in automotive parts and materials throughout the supply chain.

This declaration is based on internal quality controls.
